

FOR IMMEDIATE RELEASE

## **Air Europa mobilizes its maintenance with TRAX eMRO and eMobility**

MIAMI, August 4, 2021 – Air Europa Lineas Aéreas (AE) – known for their modern fleet, breakthrough technology, and commitment to sustainability – has successfully implemented the TRAX eMRO and eMobility aviation maintenance software. Air Europa mobilized their maintenance workforce by deploying the TRAX solutions that allow them to work from anywhere on their mobile devices. eMRO is a web-based, device-agnostic ERP software that keeps users connected from wherever they work. The eMobility suite of iOS apps is truly mobile due to its off-line capability and automatic synchronization when network connectivity is available.

For Air Europa, the implementation of TRAX eMRO and eMobility software is a milestone in its aircraft maintenance transformation plan. With its activation, Air Europa becomes the first Spanish airline to have its entire maintenance management system digitalized, which places it at the forefront in the efficiency of processes and complete control of the maintenance of the aircraft that make up the fleet.

Pedro Macías, Air Europa's Maintenance Director, thanked TRAX for all the help and support received during the implementation of its software, which, as he explains, has resulted in a radical change in the conception and execution of all maintenance activities, having a positive impact on all of them, both purely operational (planning, execution of tasks, management of the supply chain, etc.) and financial, relating to cost control. In this way, Macías adds, "our basic management pillars, which are quality and safety, cost control, punctuality in our work, continuous improvement and innovation, are totally reinforced".

The implementation of the software, Macías adds, "is part of a continuous improvement process that will undoubtedly have a positive impact on our efficiency and performance and will also involve, among other measures, the gradual incorporation of the latest improvements in predictive maintenance and the availability of real-time information with flight crews".
